

AMISTRONG™

(Amikacin Sulphate Injection)

- ♦ AMISTRONG™ is an Amikacin sulphate based, ready to use, sterile aminoglycoside antibiotic injection with potent bactericidal action against gram negative strains.
- ♦ AMISTRONG™ is suitable for treatment of infections of Pseudomonas, staphylococcus, Enterobacter, Serratia, Proteus, Acinetobacter, Klebsiella.
- ♦ AMISTRONG™ is effective against many aminoglycoside-resistant strains, due to its ability to resist degradation by aminoglycoside inactivating enzymes that are known to affect gentamicin, tobramycin & kanamycin.

Composition : Each ml contains:

- ♦ Amikacin Sulphate IP equivalent to Amikacin 250 mg
- ♦ Methyl paraben IP 0.18 % w/v
- ♦ Propyl paraben IP 0.025 % w/v
- ♦ Water for Injection IP q.s

Mode of Action :

Amikacin in **AMISTRONG™** acts by inhibition of bacterial protein synthesis. Amikacin crosses outer bacterial membrane by passive diffusion via porin channels and

- ♦ Irreversibly binds to 30s ribosomal subunit
- ♦ Prevents the formation of an initiation complex of peptide formation
- ♦ Causes misreading of the messenger RNA message
- ♦ Leads to the production of nonsense peptides and there by inhibits protein synthesis.

Amikacin also increases membrane leakage, which inturn leads to bacterial cell death.

AMISTRONG™

(Amikacin Sulphate Injection)

Indications:

AMISTRONG™ is indicated for use in the treatment of Chronic respiratory disease (CRD), Bronchitis, Salmonellosis, Fowl Cholera, Early Chick Mortality, Infectious Coryza, Colibacillosis, Colisepticemia and Other Mixed / Secondary infections in birds.

Key Benefits:

- ◆ AMISTRONG™ exerts broad spectrum antibiotic activity and shows resistance towards aminoglycoside inactivating enzymes produced by certain strains of bacteria.
- ◆ AMISTRONG™ is active against majority of aerobic gram negative bacilli.
- ◆ AMISTRONG™ effectively controls nearly all strains of Klebsiella, Enterobacter and E. Coli that are resistant to other aminoglycoside antibiotics such as Gentamycin & Tobramycin.
- ◆ AMISTRONG™ offers effective treatment for respiratory and urogenital tract infections without any immuno-suppression.
- ◆ AMISTRONG™ undergoes very little or no hepatic metabolism hence very suitable in systemically ill birds with impaired hepatic function.
- ◆ AMISTRONG™ shows synergism in controlling infection when administered in conjunction with β -lactams.

Dosage & Administration:

Poultry : 20 mg/kg b.wt. By Subcutaneous injection as a single dose.

Withdrawal Period:

For Meat: 29 days after last administration

For Milk: 6-7 days after last administration

Presentation: 30 ml, 50 ml & 100 ml glass vials.
