

CHEQVIR™-TT

RR VETERINARY
HEALTH CARE PVT. LTD.

"An Excellent Broad Spectrum Biocide for Infection Control"

Role of Disinfection in Biosecurity:

- ◆ Disinfection plays a crucial role in biosecurity by actively eliminating harmful microorganisms from surfaces and equipment, preventing the spread of disease within a controlled environment.
- ◆ Disinfection is considered as a key component of preventative measures to maintain a high level of hygiene in animal husbandry settings, laboratories, and other settings where pathogen control is very much important.
- ★ Disinfection essentially, acts as a critical barrier against potential disease outbreaks by killing infectious agents that could contaminate the area. The process essentially involves the use of certain chemicals or their combinations called DISINFECTANTS.
- ◆ CHEQVIR-TT™ is an organotin based disinfectant that exhibits potent microbicidal, fungicidal and surfactant properties and effective against several pathogens such as Staphylococcus aureus, Escherichia coli, Pseudomonas aeruginosa, Legionella pneumophila, Stachybotrys chartarum, enveloped and non-enveloped viruses.

Composition:

Each 100 ml of CHEQVIR - TT™ contains

- ◆ Tributyl Tin Oxide..... 0.5 g
- ◆ Glutaraldehyde..... 10 g
- ◆ Didecyl dimethyl ammonium chloride 15 g
- ◆ Benzalkonium chloride..... 15 g
- ★ Excipients..... Q.S.

Feature

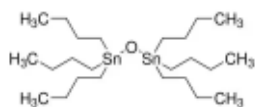

CHEQVIR™-TT

Spectrum Activity :

Gram positive bacteria and Gram negative bacteria, fungi, Enveloped and Non-Enveloped viruses

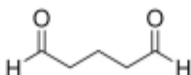

Mode of Action

1. Tributyl Tin Oxide

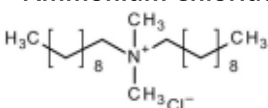

Tributyl Tin Oxide (TBTO) in CHEQVIR-TT™ is a Organo-tin compound that disrupts cellular processes within the fungus, primarily through its interference with the endocrine system, specifically by inhibiting the aromatase enzyme, which is crucial for the production of essential hormones in fungi, leading to impaired growth and reproduction. (Aromatase inhibition further prevents the conversion of androgens into estrogens, which in turn play a vital role in reproduction).

2. Glutaraldehyde

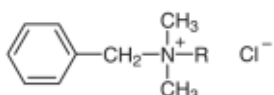

Glutaraldehyde in CHEQVIR-TT™ alkylates sulfhydryl, hydroxyl, carboxyl, and amino groups of microorganisms, which alters RNA, DNA, and protein synthesis.

3. Didecyl Dimethyl Ammonium Chloride

Didecyl dimethyl ammonium chloride (DDAC), a QAC in CHEQVIR-TT™ inactivates energy-producing enzymes (such as ATPase), induces denaturation of essential cell proteins, and disrupts the cell membrane integrity.

4. Benzalkonium Chloride

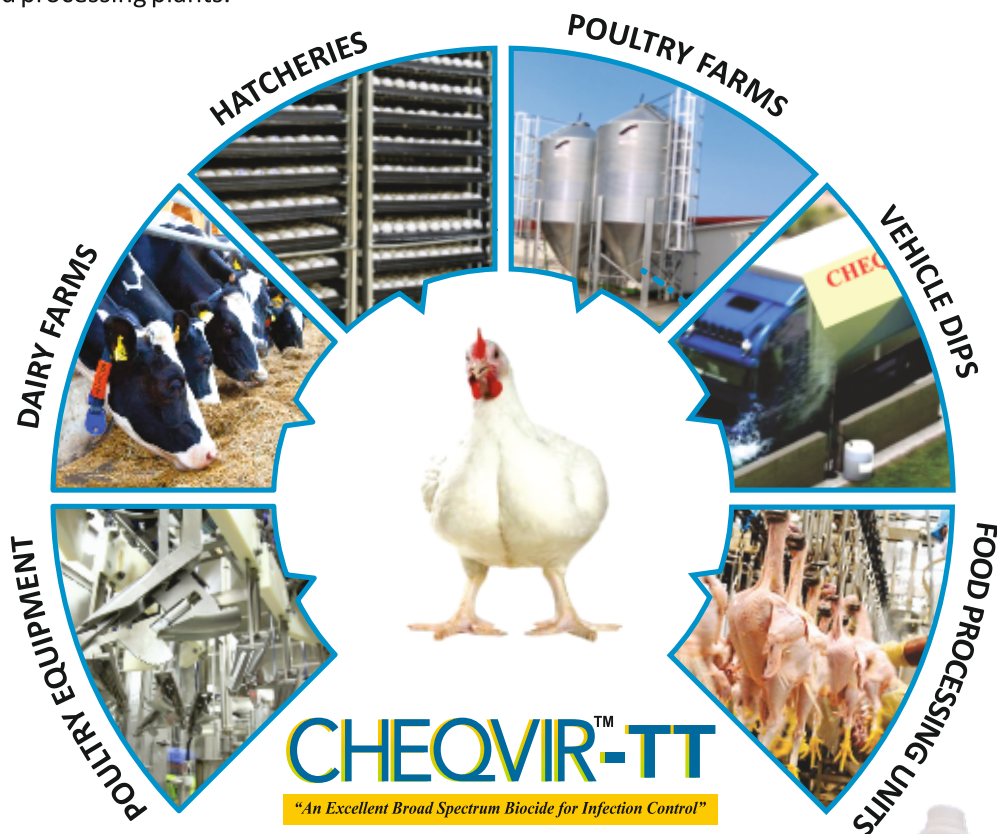

Benzalkonium Chloride (QAC) in CHEQVIR-TT™ effects cytoplasmic membrane, which controls cell permeability. The hydrophilic region of BAC interacts with the bacterial cell membrane and the hydrophobic region causes the cell death.

Indications:

- ◆ Helps in the control and prevention of both Gram positive & Gram negative bacteria.
- ◆ Effective against Enveloped viruses, Non Enveloped viruses, Mycoplasma, yeast and molds
- ◆ Excellent disinfectant of choice for use in Application areas such as
 - ◆ Poultry sheds
 - ◆ Foot & Vehicle Dips
 - ◆ Equipments
 - ◆ Hatcheries
 - ◆ Dairy farms
 - ◆ Food processing plants.

Key Benefits:

- ◆ An excellent disinfectant with a broad spectrum activity for controlling spread of infections.
- ◆ Chemically well balanced disinfectant highly active at both high and low temperatures.
- ◆ Works efficiently even in the presence of hard water or high loads of organic matter.
- ◆ Non-irritating, non-corrosive, non-tainting disinfectant with high penetrability & low toxicity and can be used in the presence of birds.
- ◆ Armored with both deodorant and detergent actions, Cheqvir-TT is an easily Biodegradable disinfectant with high residual effect.
- ★ TBTO in the preparation acts as an effective antifungal agent, while QUATS containing long carbon chain(C12, C14 and C16) provide high disinfection capability.

Recommended Usage:

Surface Disinfection (Non- Food Contact Areas): 4.0 ml. per litre water (1 litre of prepared solution can be sprayed over 25 sq. ft. area.

In presence of birds: 4.0 ml. per litre water
(1 litre of prepared solution can be sprayed over 150 sq. ft. area
(or) As suggested by the Veterinarian

Presentation: 1 Liter & 5 Liters HDPE containers.
