

PHENOKIL

An Ideal Black phenyl that kills microbes effectively

RR VETERINARY
HEALTH CARE PVT. LTD.

Disinfection A Crucial Step for Control of Diseases:

- ◆ Microbial disinfection becomes an imperative step in controlling the disease spread that results from microbial outbreaks.
- ◆ It is essential to restrict the spread of microorganisms especially in the areas where there is high scope for microbial multiplication and cross contamination.
- ◆ Disinfectants with high germicidal activity and efficacy are therefore required to restrict the spread of microbial epidemics.
- ◆ RR VETERINARY HEALTH CARE PRIVATE LIMITED proudly launches PHENOKIL, a Grade-I Phenol based disinfectant (RWC 18) that effectively controls microbial spread.

COMPOSITION OF PHENOKIL:

PHENOKIL Contains High Boiling Tar Acid (HBTA) rich creosote oil and a combination of various Phenolic compounds of higher efficacy for killing germs.

BASIS FOR DETERMINING GERMICIDAL VALUE OF PHENOLIC COMPOUNDS :

RWC: RWC stands for Rideal Walker Co-efficient. Salmonella typhosa is used as test organism in determining RWC value.

SAC: SAC stands for Staphylococcus aureus Co-efficient. Staphylococcus aureus is used as test organism in determining SAC value. Grades, Classes & Types of Phenolic Compounds according to DRUGS AND COSMETICS RULES, 1945.

Grade	RWC (Minimum)*	IDEAL FOR
1	18	Vehicle dips of Poultry farms & Hatcheries, Dairy farms, Kennels, Hospitals & Other public places where microbial load is too high.
2	10	For general cleaning where the microbial load is at a medium level.
3	5	For Domestic cleaning where the microbial load is at a low-medium level e.g. House hold cleaning purpose.

Note*

Higher the RWC greater is the germicidal value of the material, where RWC 1 corresponds to the disinfection value of Carbolic Acid (phenol) which is taken as 1 and RWC 5 is equivalent to 5 times stronger than the Carbolic Acid.

CLASSES OF PHENOLIC DISINFECTANTS:

A) Black fluid B) White fluid

TYPES OF PHENOLIC DISINFECTANTS:

- ◆ Type I – Stable in the range of 15°C to 45°C.
- ◆ Type II – Stable in the range of 5°C to 30°C (winter).

DIRECTIONS FOR USE:

- ◆ Foot dips and Vehicle dips : 0.5% - 1% (5-10 ml/lit of water).
- ◆ Drains (highly soiled areas) : min 1% (10 ml/lit of water).
- ◆ Floor Mopping/Cleaning : 0.5% (5 ml/lit of water) & 0.4% (4 ml/lit of water) while used with high pressure jet machine.
- ◆ General usage : 0.5% (5 ml/lit of water).

Note*

Based on soiling level the dosage may vary (or) as suggested by the Veterinarian.

20 LTRS MS Drum
