

Why Organic/ Chelated Trace Minerals?

Inorganic sources of trace minerals are efficiently absorbed and utilized up to a point (POINT OF SATURATION). Beyond a certain level, inorganic supplementation of trace minerals does not evoke a positive response and may in fact hamper performance. So, beyond a certain level of supplementation, organic/chelated forms of the essential trace minerals should be incorporated in a ration in order to maximize animal performance.

What is Chelation?

Chelation is a process of attaching specific organic molecules to a mineral in two or more places to form a ring like structure. The organic molecules hold the mineral like a claw, acting as a fence to protect the mineral from adverse interactions with other substances. In the body's natural process of digestion, organic acids and amino acids are used to chelate minerals naturally to help transport them across the intestinal wall.

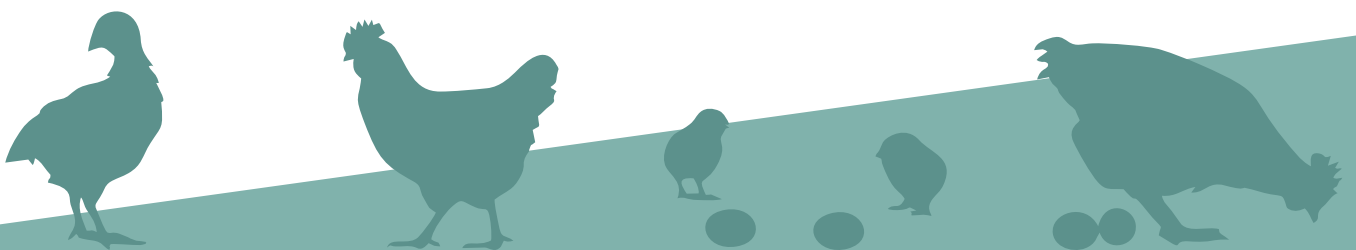

Organic Trace minerals -A step ahead:

Animal response trials in relation to the application of zinc in broilers by Cheng et al., confirmed an increased performance through the use of organic minerals. These studies demonstrated that feeding supplementary organic trace minerals beyond the "saturation point" continued to increase performance. Compared to inorganic trace minerals, organic trace minerals are much more effective as

- ⇒ They are highly water soluble & Eco safe
- ⇒ They remain stable throughout the digestion process
- ⇒ They show increased bioavailability
- ⇒ They show superior metabolic activity
- ⇒ They enhance absorption, and
- ⇒ produce an economic response in the animal.

What Is Qualimin Gold?

QUALIMIN GOLD is a unique and improved composition of trace minerals in a chelated form and provides the bird with an advantage of enhanced digestive tract stability, bioavailability and absorption of minerals. QUALIMIN GOLD strikes a balance between exact mineral nutrient requirements and the bioavailable pool of minerals in the bird's body and also improves the feed efficiency in birds.

Key Benefits:

QUALIMIN GOLD counteract antinutritional factors such as Phytate, Oxalate, Mimosine, Gossypol, which affects mineral absorption

QUALIMIN GOLD helps in the control and prevention of Minerals and Amino Acid Deficiency in Poultry.

QUALIMIN GOLD supplementation provides trace mineral sources that are readily bioavailable to the animal and allow for a lower inclusion rate in the diet, thus minimize mineral losses in animal excreta.

QUALIMIN GOLD improves cellular metabolism and stimulates the immune system.

QUALIMIN GOLD improves oxygenation of RBCs and facilitates proper blood circulation.

QUALIMIN GOLD improves Fertility, Hatchability and Eggshell quality.

QUALIMIN GOLD helps in improving carcass quality, achieving better weight gain and improves FCR.

Composition:

Copper	:	8 grams
Manganese	:	55 grams
Potassium Iodide	:	4 grams
Zinc	:	55 grams
Cobalt	:	1 gram
Iron	:	30 grams
Selenium	:	300 ppm
Chromium	:	250 ppm
Boron	:	5 grams

Base enriched with calcium and aminoacids

Dosage:

Layers & Broilers: 500-1 Kg/Ton of feed

Breeders: 1 Kg-2 Kg/Ton of feed

(OR)

As suggested by the veterinarian.

Presentation:

25 Kg BOPP Bags.

RR VETERINARY
HEALTH CARE PVT. LTD.

An ISO 9001:2015 Certified Company

#4-122/1/1, Plot no. 115 & 123, Kuntloor Village, Abdullapurmet Mandal, R R Dist - 501 505, Telangana, INDIA.

For customer complaints, contact: Customer Care Executive at the above address or call +91 94904 10562.
