BROMELEVTM

LEVOFLOXACIN-BROMHEXINE LIQUID

Levofloxacin is the L-isomer of the racemate, Ofloxacin, a fluoroquinolone antimicrobial agent. Levofloxacin is effective against gram positive and gram negative bacteria. Bromohexine is a mucolytic, antioxidant agent that is a Prodrug of Ambroxol. Bromhexine liquefies and eliminates bronchial secretions from respiratory tract.

Composition:

Each ml of BROMELEV contains:

- Levofloxacin Hemihydrate IP 200 mg
- Bromohexine Hydrochloride IP 15 mg
- Excipients q.s.

Mode of Action:

Levofloxacin inhibits bacteria type II topoisomerases, topoisomerases IV and DNA gyrase, enzymes that are vital for DNA replication, transcription, repair and recombination. Bromhexine inhibits NO-dependent activation of soluble guanylate cyclase. Shows secretolytic effects in vivo. Bromhexine acts on the mucus at the formative stages in the glands, within the mucus-secreting cells. Bromhexine disrupts the structure of acid mucopolysaccharide fibres in mucoid sputum and produces less viscous mucus, which is easier to expectorate.

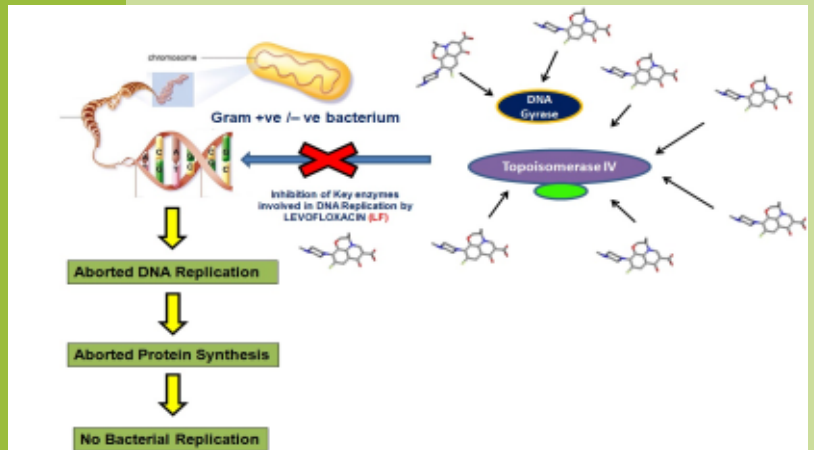

BROMELEV™

Indications:

BROMELEV™ is indicated for use in the treatment of infections caused by gram positive and gram negative microorganisms.

Mainly the combination is used to treat

- Chronic respiratory disease (CRD)
- Complex CRD
- E. Coli infections
- Bronchitis
- Salmonellosis
- Infectious Coryza
- Other Mixed & Secondary infections.

Recommended Usage:

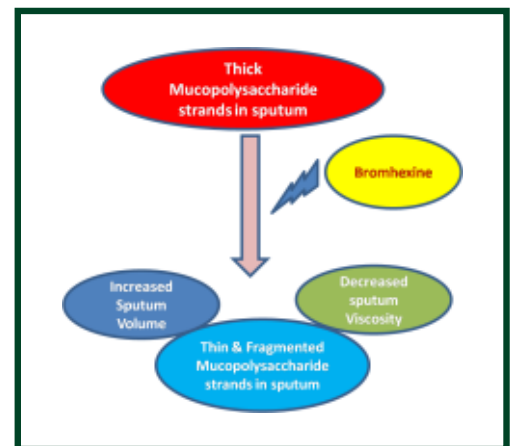

0.5 ml to 1.0 ml per litre of drinking water for 3-5 Days or as recommended by the Veterinary Practitioner.

Withdrawal Period:

- For Chicken: 28 days
- For Eggs: 7 days

Presentation:

1 Litre HDPE Containers
